

Golf for Impact: 2025 Beneficiaries

Seattle

We are raising funds to support Seattle based organizations that are doing incredible work in our communities to protect, preserve and restore the environment and natural world. Their missions are focused on building a healthy and sustainable planet and partnering with low-income and underserved communities.

BIKE WORKS

Supports underserved communities with access to affordable transportation through sustainable solutions

Bike Works is committed to youth empowerment by making cycling accessible and building confidence. The goal is to build inclusive communities, provide accessible and affordable bike services and keep thousands of bikes from the landfills. Bike Works provides programs for young people ages 9-17 to foster a sense of belonging and value. In addition, Bike Works hosts free and low-cost offerings for youth and adults from diverse and underserved backgrounds.

SPARK NORTHWEST

Supports underserved communities by promoting an equitable clean energy transition

Spark Northwest partners with rural, low-income, underserved, and BIPOC communities to build equitable clean energy solutions. The approach includes implementing initiatives that implement clean energy programs to help marginalized communities build wealth and gain access to the benefits of clean energy. Spark Northwest works to facilitate community clean energy plans, provide clean energy skill building, develop clean energy projects, secure funding, drive residency clean energy campaigns, and drive policy support and change.

EARTHGEN WA

Supports youth to grow their power as changemakers for a healthy environment

EarthGen supports youth, educators and school communities to lead us to a health environment. EarthGen leads science-based, action-oriented programs in order for young people to gain skills and knowledge to become leaders. These programs target young people in underserved communities and align with state academic requirements as well as community specific needs. These programs provide science units, professional development for educators and science literacy programs for both students and teachers. The impact of EarthGen has resulted in a greater school focus on sustainability, increase in green space, and communities coming together to create solutions for a better environment.
